Art Unit: 3738

Claims 27-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The format for the apparent alternative expression on the last two lines of claim 27 is improper (MPEP 2173.05(h)).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 and 27-29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hagege et al., FR 2 734 472 A1, which discloses a frame **11** having haptics **14** and **15** and being configured to vault posteriorly in an eye, as seen from Figures 5 and 7.

Claims 1-4 and 27-29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gorban et al., RU 2026040 C1.

Claims 1, 2, 5-13, and 16-30 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Guilbert et al., FR 2 728 459 A1. Since the bridges or haptics **31** have portions that are elongated (e.g., Figure 5), they are deemed to extend oppositely and longitudinally. The end portions of the frame **28** can be viewed as either the “mushroom caps” of the haptics **31** or as the double ring ends defining the aperture (e.g., **14**). The frame is configured to vault

posteriorly (Figure 2), and various types of interengaging features for attachment of an optic to the frame are illustrated in the drawings.

Claims 3, 4, 14, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guilbert et al., FR 2 728 459 A1. The particular thickness would have been obvious from the anatomical representation of Figure 2 and in order to facilitate insertion through an incision of "not more than 3 mm" (Derwent abstract, last line). Also, the double supporting ring is said to be "1.5-2.5 mm in size" (Derwent abstract, line 4), and the drawings suggest that the optic thickness is smaller than said size.

The Applicant's remarks have been reviewed and are believed to be adequately addressed above.
